Position: Senior Node.js Developer

Department: Technology and Development

Are you an aspiring Node.js Developer looking for an opportunity to work in a great team and advance your skills and career?

If you are an analytical problem solver with a strong Node.JS knowledge and a passion for team work and innovation & mentoring, we have the perfect job for you!

Responsibilities:

- Co-architecting the Node.js solutions, and managing the applications
- Close collaboration with other project stakeholders
- Focus on code quality & willingness to learn new technologies
- Exude a strong sense of feature ownership, agility and an urge for continuous learning
- Care about all the steps your code goes through from your machine to production

You Will Thrive at Elixia if,

- You can operate in a fast paced, dynamic environment
- You relate to our company's vision and are willing to go the extra mile
- You love to work with emerging technologies

Desired Candidate Profile

- 4+ years of back-end software engineering experience using Node.js
- People management and process adherence across the team
- Some experience or familiarity with Typescript
- Thorough understanding of asynchronous programming paradigm and its quirks and workarounds
- Excellent communication and teamwork skills
- Ability to operate independently without significant oversight
- Ability to build robust backend applications with a vision to scale
- Strong leadership skills and and ability to collaborate with multiple project stakeholders
- Someone used to working with code versioning tools like Git in a continuous delivery process
- Experience building RESTful microservices
- Familiarity with different Microservices architectural patterns (gRPC, CQRS)
- Experience with Nest JS framework
- Familiarity with CI/CD

Required skills

- Node.js (experience with NestJS is a plus)
- Typescript / Javascript (es6+)
- GraphQL
- Git
- MySQL
- MongoDB
- AWS (API gateway, RDS)
